

The Unsanitary & Unsafe Practices of Traditional Bottled Water Delivery Services

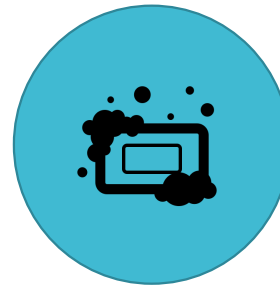

Facts and Realizations about how we stay hydrated!

Bottled Water's
journey from bottler
to consumption...

HUMAN
INTERACTION
TO PRODUCE AND DELIVER

SANITIZATION
SHORTCOMINGS

BOTTLES
VS.
BOTTLE FREE

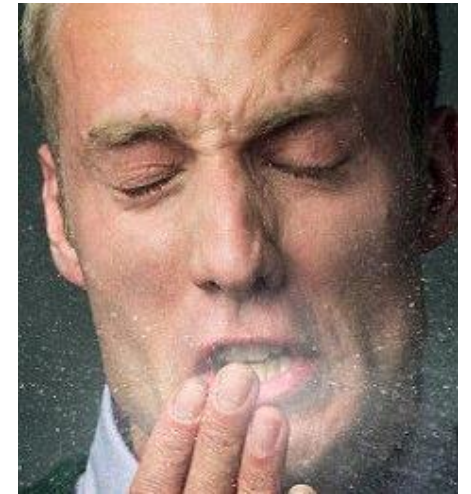

The facts tell us that most people do not wash their hands nearly enough to prevent germs and viruses from affecting our fellow employee...

Germs and Viruses

- More than **70 million lost workdays annually** are due to absenteeism
- **145 million** due to presenteeism of the common cold, influenza, and other viral respiratory tract infections
- Influenza is one of the most prevalent viral infections worldwide
- Transmission can be direct through aerosol inhalation as well as through contact with contaminated surfaces
- It is estimated that a virus can be airborne for **3 hours in aerosol particles** that were sneezed or coughed into the air
- Viruses can live on plastic surfaces for as long as **3-5 days**

****Norovirus** is another highly contagious pathogen and leading cause of viral illnesses in the U.S. **

QUESTIONS YOU NEED TO START ASKING ABOUT YOUR DELIVERED WATER

From Production to Delivery...AND Touch Points In Between!

The journey that a bottle of water takes from being filled at a bottling facility to being flipped upside down on your cooler requires an **excessive** amount of human interaction.

- Did they wash their hands?
- Is the delivery driver ill?
- How many people have moved it?
- How many people have touched the neck of the bottle that is going to end up inside your cooler?
- Who's coughing or sneezing around the bottles or into their hand before grabbing the bottle and placing it on your cooler?

Touch Point #1...

Bottled and shelved as inventory.

Touch Point #2...

Taken from inventory.
Then heads to the delivery
truck to be loaded.

Touch Point #3...

Loaded onto the delivery truck.

It is important to note that the best way to easily and securely grab the bottles is to hold it by the neck of the bottle. This is the part that feeds the water to the cooler

Touch Point #4...

Then Finally gets delivered to your facility.

Sanitization Shortcomings Outside the Cooler...

- **"A typical office employee is in contact with 10 million germs each day. Just one person carrying a virus can infect up to 50% of all employees and the office equipment in their general vicinity within 4 hours"** - University of Arizona Microbiologist "Germ Guru" Charles Gerba
 - Bottled water coolers require interaction to reload and resupply, subjecting them to a variety of cross contamination issues.
 - The water that was delivered as purified is no longer uncontaminated once flipped upside down on the cooler.

Sanitization Shortcomings Inside the Cooler...

- When the cooler gurgles its drawing air in from the outside environment to release the pressure and drop the water into your glass.
 - Chlorine is removed from the water. The cooler now lacks protection so it begins to grow bacteria and bio-film internally!

Dimensions, Ergonomics and Features

Reverse Osmosis – 98% Purified Drinking Water

Anti-Microbial Surface - Prevents germs and bacteria from colonizing on the surface (WS-11,000).

Closed System – Eliminates airborne germs and viruses from contaminating the water.

In-Tank Sanitization – Eliminates the petri dish that grows in the open system bottled water cooler. Virus and bacteria free.

Bottle Free – Unlimited supply of purified drinking water.

Service and Certifications...It's all Included!

Rental Program that can be billed Monthly, Quarterly, or Annually by check, credit card, or ACH.

Customer Satisfaction Guarantee is included with every rented dispenser that is installed.

Service:

All-Inclusive:

- All parts, labor, standard filters, any reactive service calls and an annual PM.
- Unlimited Purified Drinking Water
- Prompt Local Service
- Loaner Unit if Necessary
- Full Replacement Warranty

9 – Step Diagnostic Check on Service Calls

- Visual Inspection
- Filter Inspection and replacement as necessary
- Water Tank Inspection and sanitizing as necessary
- Water Analysis
- Electrical Component Inspection
- Exterior Cleaning
- Water Temperature Test
- Hose and Fitting Inspection
- Installation Site Clean-Up

Certifications:

Our dispensers have all of the National and European Certifications available...

NSF/ANSI 42 – Drinking Water Units – Carbon Filtration

NSF/ANSI 53 – Drinking Water Units, Health Effects

NSF/ANSI 58 – Drinking Water Units, Reverse Osmosis

UL – Underwriters Laboratory Inc.

Water Quality Association "Gold Seal"

Certified Peace of Mind!!!

Features and Benefits

Technology provides a much safer and healthier way of providing purified drinking water in unlimited amounts!!!

Sideline conversations for the moment about lost productivity and the environmental impact of bottled water...**What are the health implications of its continued use?**

Bottle Free Dispensers

Yes

- **Closed System** eliminates contamination from airborne germs and viruses...**Health**

Yes

- **Unlimited Supply** being purified at the point of dispense eliminates the need for excessive visits to deliver more...**Less Interaction (Health)**

Yes

- **In-Tank Sanitization** eliminates the petri dish that grows inside a bottled water cooler...**Health**

Yes

- **Bottle Free** eliminates human interaction with bottles that are contaminated by anything floating in the air and everyone's hands that touch them...**Health**

Yes

- **Anti-Microbial Surface** prevents germs and bacteria from colonizing on the surface of the cooler...**Health**

Yes

- **Reduces Vendor Visits** by 92% annually thus reducing the potential risk of viral and germ related illness from outsiders...**Health**

Yes

- **Reduced Human Interaction** no more bottle changes...**Health & Productivity**

Yes

- **Essential Minerals** such as Calcium and Magnesium added back...**Health**

Peace of Mind!

- **Safe-Guard** that complies with a responsible sanitization protocol...
